and options.

AN IDEA THAT MAKES A DIFFERENCE

The concept for a better world of work.

We reinvent ergonomics.

Logistical processes are complex, coordinated and highly automated so that goods can be transported from A to B cost-effectively, quickly and reliably. Nevertheless, there are always things that do not fit into the scheme. In such cases, employees have to move heavy loads manually.

The challenge

In many situations, even conventional tools such as pallet trucks, forklifts or electric tugs are not suitable: tight spaces, bulky loads, limited turning circles. It has to be moved „by hand“. The consequences: physical overload, safety risks or processes being slowed down. More intelligent solutions are needed to make workplaces ergonomic, safe and attractive.

The answer: ErgoMove

ErgoMove is a unique electric drive system. Based on the latest developments in the field of electromobility, ergonomic findings and extensive field studies, Blicke has developed a portfolio of e-mobility solutions with which a person can move, manoeuvre and stop loads of up to 4,000 kilograms intuitively, safely and without physical effort by hand. Accidents at work are avoided, sick days are reduced and more efficient processes are created. A real win-win situation for workers and the company.

Distribution of incapacity to work

Musculoskeletal disorders cause the most days of absence.

More than a third of all absences from work are due to musculoskeletal disorders, injuries and accidents (35.4 %).

BMAS/BAuA (2021): Safety and Health at Work
Reporting Year 2021

ERGOMOVE
moving everything. anywhere.

ErgoMove – the benefits

Heavy loads

Up to four tons of load can be moved, maneuvered, and safely braked by a single employee without physical strain.

Narrow paths and bulky loads

The steering assistance (differential drive) of the two drive wheels in combination with two or four castor wheels makes it easy to manoeuvre devices equipped with ErgoMove around corners. Additionally, smaller turning circles can be achieved compared to conventional solutions.

24/7 operation

With standard interchangeable batteries, ErgoMove systems can be reliably used in a multi-shift operation at any time, ensuring continuous and secure processes.

Frequent Start-Stop cycles

Even when transporting light loads, a high frequency of start-stop cycles can lead to significant physical strain for workers. ErgoMove systems are particularly helpful in protecting the health of employees in such scenarios while simultaneously enhancing process efficiency.

A perfect solution considers every detail.

The ErgoMove system takes everyone and everything further.

ErgoMove is a highly flexible, modular system that equips various means of transport vehicles, machines and systems with electrically operated driving, manoeuvring and braking support via plug & play.

The idea

Four aspects were in focus during the development of ErgoMove:

- How can the interface between human and transport device be designed as intuitively as possible while still encompassing all safety features?
- How can the interface between surface and transport device, as well as the electrical drive solution, be designed to be as powerful and compact as possible?
- How should the product portfolio be structured to be flexible and modular, allowing adaptation to various applications?
- How can an accessory kit be defined to enable individual and easy customization of the systems for different operating conditions?

The system concept

The result: a product family comprising various control concepts, drive concepts, and accessories that adhere to the highest industrial standards.

This allows everything to be transported ergonomically and safely to any location:

ErgoMove. Moving everything. Anywhere.

Automation meets flexibility

In situations where fully automated solutions (such as AGVs) are too complex and expensive, the electric drive systems of the ErgoMove brand provide a highly flexible and cost-effective solution.

Fluid and fluctuating loads

With a finely tuned and configurable control of the drive wheels, even containers with liquids or bulk goods can be gently approached.

ErgoMove – the system

control concepts, drive concepts and options.

The systems at a glance.

The right power for every application: ErgoMove offers seven different series in four performance classes from 500 to 4,000 kilograms. An optimised set of powered fixed castors with powerful motors, cockpit systems and accessory components has been developed for each performance class. What they all have in common is a comprehensive safety concept.

ErgoMove control concepts.

It's simple. And good.

Safe handling and intuitive operation – that's what distinguishes the innovative ErgoMove control concepts. They were developed in collaboration with renowned universities such as the University of Stuttgart, the University of Saarland, and the Heilbronn University. High-quality materials and components ensure robustness and guarantee trouble-free operation. All control concepts can be easily adapted to existing machines and equipment.

The elements

- A cockpit that consolidates all important functions and information for the user
- Controls that enable optimal ergonomic use and intuitive operation
- A controller that serves as the central hub for ErgoMove with the ErgoMove software
- A battery unit consisting of proven, industrially tested batteries

The safety

A comprehensive safety concept according to DIN EN ISO 3691-5 for pedestrian-controlled industrial trucks ensures that accident risks are minimised:

- Emergency stop with emergency brake function
- Brake release through sensor hand recognition as protection against uncontrolled movement
- Key switch as protection against unauthorised starting
- Horn as an acoustic warning device
- Anti-trap protection
- Motor brake and electromechanical dead man's brake bring equipment to a stop when released
- Electromechanical dead man's brakes as parking brakes

Control concept compact for the series ErgoMove 500 and ErgoBoost

This control concept is characterised by its particularly compact design and is therefore especially well-suited for integration into existing devices and machinery.

Variant 1: Sensor handle with pre-assembled bracket (-SxxxU)

- Intuitive driving and steering through integrated force sensing
- Button for differential lock during straight-line driving
- Available in various lengths
- Forward and reverse speed of 5 km/h
- Automatic recognition of single/dual-hand operation
- Only available for ErgoMove 500

Variant 2: Handle with rotary joystick (-1FG)

- Simple and precise operation
- Ideal for longer straight-line drives, rail applications or applications where the stability of the vehicle is not sufficient for the sensor handle
- Available as left or right handle variant
- Speeds:
ErgoMove 500: Forward and reverse 5 km/h; ErgoBoost: Forward and reverse 3 km/h

Power supply unit

- Battery holder and 2 interchangeable batteries (18 V, 5.2 Ah) included
- Basic Box variant: Battery isolator switch to interrupt power supply
- Safety Box variant: Emergency stop according to machinery directive, as well as key switch for operation authorization
- For the ErgoBoost series, power is supplied through a single interchangeable battery connected by a battery holder

Basic Box

Safety Box

Assembly instructions

- Variant sensor handle and rotary joystick: Pre-assembled cables (each 3 m) to the drive wheels and the cockpit
- Variant sensor handle: Available optionally without pre-assembled bracket
- Variant rotary joystick: Mounting plate for installation (pipe clamps for tube mounting available optionally)

CONTROL CONCEPTS

Control concept Ergonomic-Cockpit for the series ErgoMove 1000, 1000T and 2000P

This control concept is distinguished by its extensive safety technology and intuitive operation, providing the highest level of user comfort.

Variant 1: Ergonomic-Cockpit with power sensor (-EG)

- Especially intuitive operation through integrated force sensing
- The slightest forces applied by the operator to the cockpit are detected and transferred to the drive rollers
- Steering assistance in single or dual-hand operation
- Automatic recognition of single/dual-hand operation

Variant 2: Ergonomic-Cockpit with two rotary joysticks (-2FG)

- Operation through rotary joystick
- Precise maneuvering in dual-hand operation, straight-line driving in single-hand operation
- Ideal for longer straight-line drives or rail applications
- Automatic recognition of single/dual-hand operation

Variant 3: SWITCH&MOVE

- Pluggable cockpit unit (EM-EG-SM) with the ability to operate multiple chassis with just one cockpit
- High-quality plug connection with locking lever on the plug adapter (including plastic cover)
- Reduction of ErgoMove investment costs by using one cockpit for multiple trolleys (cost advantage from 3 systems onwards)
- Optionally available as a variant with two rotary joysticks (EM-2FG-SM)

Integrated into the cockpit:

- Control and two interchangeable batteries (18 V, 5.2 Ah)
- Pre-assembled cables (each 3 m) to the drive rollers
- Pinch protection via force sensing or mushroom button

Assembly instructions:

- Ergonomic-Cockpit variant with power sensor: Mounting directly on the application through screwing or using a central adapter tube on the cart (optionally available)
- Ergonomic-Cockpit variant with two rotary joysticks: Mounting on existing cart tubes using bracket clamps

Control concept Flex

for the series ErgoMove 2000, 2000T and 4000

This control concept is characterised by its high robustness and mechanical customizability, making it flexible for use in very specialised applications.

Variant 1: Flex-Cockpit with one rotary joystick (-1FG)

- Simple operation (without steering assistance)
- Ideal for longer straight-line drives or rail applications
- Operating mode I: EM2000 / EM2000T: forward 2 km/h – reverse 2 km/h
- Operating mode II: EM2000 / EM2000T: forward 4 km/h – reverse 2 km/h

Variant 2: Flex-Cockpit with two rotary joysticks (-2FG):

- Simple operation including steering assistance
- Small turning radius through differential control
- Selectable single or dual-hand operation
- Operating mode I: Motors are controlled synchronously
EM2000 / EM2000T: forward 4 km/h – reverse 2 km/h
EM4000: forward 2 km/h – reverse 1 km/h
- Operating mode II: Motors are controlled individually (precise maneuvering)
EM2000 / EM2000T: forward and reverse 2 km/h; EM4000: forward and reverse 1 km/h

Variant 3: Flex-Cockpit Remote Control (-RC)

- Wired cockpit for challenging visibility conditions
- Provides better visibility of the application and the track while driving
- Carrying strap for easier handling of the cockpit (upon request)
- Operating mode I: Motors are controlled synchronously
EM4000 forward 2 km/h – reverse 1 km/h
- Operating mode II: Motors are controlled individually (precise maneuvering)
EM4000 forward and reverse 1 km/h
- Only available for ErgoMove 4000

Power supply unit

- Integrated control and battery unit
- Li-Ion battery, 21 Ah, 25 V
- Dimensions: 300 x 630 x 120 mm
- Optional with replaceable battery box available

Assembly instructions

- Variant Flex-Cockpit with 1 or 2 rotary joysticks: Mounting via bracket clamps for tube diameters 33–36 mm; includes cables to the control box (3 m)

ErgoMove drive concepts.

Think forward. And navigate the curve.

The drive units consist of brushless DC motors in various power classes with two driven load-bearing fixed castors. Only the compact ErgoBoost series relies on a single, non-load-bearing fixed castor.

What is important to us: high smoothness, long lifespan, robust construction, high efficiency, high power density, compact design, and high energy efficiency.

The load-bearing fixed castors, in conjunction with Blicke premium tread materials, ensure optimal traction. Additionally, these systems facilitate steering and ensure that even heavy loads can be securely braked with electromechanical parking brakes. Depending on the model, each motor provides thrust forces ranging from 15 daN to 110 daN. For towing operations, there are drive solutions where the batteries can be recharged through recuperation.

ErgoMove 500

ErgoMove 500:

For up to 500 kilograms system load at 5 km/h

Combinable with the Control concept compact

- Two electrically driven fixed castors
- High-quality polyurethane tread Blicke Softhane®, antistatic (85 Shore A)
- Very high driving comfort due to the particularly elastic tread
- Very floor preservative, traceless, quiet operation
- Housing made of aluminum die-casting
- Brushless DC motor integrated into the roller, electric counter-current brake
- Thrust force of 15 daN per motor
- Protection class IP 44

ErgoMove 1000

- Two electrically driven fixed castors
- High-quality polyurethane tread Blicke Besthane® Soft (75 Shore A)
- Very high driving comfort due to the particularly thick, elastic tread
- Very floor preservative, traceless, quiet operation
- Housing made of robust cast iron, galvanised with blue passivation, Cr6-free
- Brushless DC motor
- Thrust force of 30 daN per motor
- Protection class IP 40, IP 44 upon request

Variant 1 ErgoMove 1000:

For up to 1,000 kilograms system load at 4 km/h

Combinable with the control concept Ergonomic-Cockpit

- Highest safety due to electromechanical parking brake (dead man's function)

Variant 2 ErgoMove 1000T:

For up to 1,000 kilograms system load at 10 km/h

Combinable with the control concept Ergonomic-Cockpit

- Towing version as a double castor
- Without electromechanical parking brake (without dead man's function)
- Automatic detection of towing operation

ErgoMove 2000

- Two electrically driven fixed castors
- High-quality polyurethane tread Blicke Besthane® Soft (75 Shore A)
- Very high driving comfort due to the particularly thick, elastic tread
- Very floor preservative, traceless, quiet operation
- Housing made of particularly robust steel welded construction, galvanised with yellow passivation, Cr6-free
- Brushless DC motor with integrated electromechanical parking brake (dead man's function)
- Thrust force of 55 daN per motor

Variant 1 ErgoMove 2000P:

For up to 2,000 kilograms system load at 4 km/h

Combinable with the control concept Ergonomic-Cockpit

- Motor protection as standard
- Optionally available in a 90° angle version for confined spaces or narrow cart frames
- Protection class IP 40 (IP 44 upon request)

Variant 2 ErgoMove 2000:

For up to 2,000 kilograms system load at 4 km/h

Combinable with the control concept flex (1 or 2 rotary joysticks)

- Protection class IP 44 (IP 65 upon request)

Variant 3 ErgoMove 2000T:

For up to 2,000 kilograms system load at 16 km/h

Combinable with the control concept flex (1 or 2 rotary joysticks)

- Towable version
- Mechanical release of the dead man's brake during towing operation using an additional unit (forced release)
- Charging of the battery during towing operation through recuperation
- Protection class IP 44

ErgoMove 4000

ErgoMove 4000:

For up to 4,000 kilograms system load at 2 km/h

Combinable with the control concept flex

- Two electrically driven fixed castors
- High-quality polyurethane tread Blicke Besthane® Soft (75 Shore A)
- Very high driving comfort due to the particularly thick, elastic tread
- Very floor preservative, traceless, quiet operation
- Housing made of particularly robust steel welded construction, galvanised with yellow passivation, Cr6 free
- Brushless DC motor with integrated electromechanical parking brake (dead man's function)
- Thrust force of 110 daN per motor
- Protection class IP 44 (IP 65 upon request)

ErgoBoost

ErgoBoost:

For up to 500 kilograms load at 3 km/h

Combinable with the control concept compact (handle with rotary joystick)

- One electrically driven fixed castor
- High-quality elastic solid rubber „Blickle EasyRoll“ in low-friction quality (65 Shore A)
- Very floor preservative, traceless, quiet operation
- Housing made of strong sheet steel, galvanised with blue passivation, Cr6-free
- Excellent spring and damping properties due to patented disc spring construction
- Brushless DC motor, electric brake (mechanical dead man's brake upon request)
- Thrust force of 20 daN
- Protection class: IP 40 with electromechanical parking brake (IP 44 upon request)

SERVICES AND ACCESSORIES

ErgoMove services and accessories.

We complete the offer.

We always support our customers. Even before the purchase, we provide detailed advice on the system's possibilities, analyze the situation and requirements, and then assemble the suitable, tailor-made ErgoMove system. A range of accessories for drive and control concepts complements the modular concept of ErgoMove. To ensure that our customers feel optimally supported before, during, and after the purchase, we have also developed a comprehensive service package specifically for ErgoMove drive systems.

The ErgoMove service portfolio – Four steps to the perfect solution

Challenge

- **Analysis:** Together, we thoroughly analyze the logistical challenges our customers face, ensuring that ergonomics, safety, and efficiency are optimally aligned.

Solution concept

- **Integration:** Based on the individual logistical challenges, we design and develop tailored solutions. We also assist in the CAD implementation of the ErgoMove solution into the existing application.
- **Practical test (Proof-of-concept):** With an optional prototype available for lease or purchase, we enable a practical test to make any necessary optimizations and fine-tuning in real-world conditions.

Implementation

- **Certification:** Upon request, our experienced experts accompany customers towards successful CE certification.
- **Training:** Our service team supports customers with post-purchase setup and employee training (worker training).

After sales

- **Safety check:** During the annual safety check-up, customers can choose to perform it themselves or enlist our service technicians.
- **Helpdesk:** Throughout the entire product lifecycle, our ErgoMove helpdesk is available to customers for all questions related to the ErgoMove system. Our after-sales team responds promptly to technical queries or system adjustment requests.
- **Repair service:** A comprehensive repair and spare parts service completes our offering, ensuring that an investment in ErgoMove remains profitable and operational for many years.

Comprehensive accessories for enhanced ergonomics

For drive units

- Mechanical enclosures for wheels, motors, and plugs of the drive rollers
- Matching swivel castors
- Spring packages to ensure ground contact of the drive rollers

For control units

- Battery theft protection
- Console extensions / adapter tubes / mounting plates
- External battery boxes

Series ErgoMove 500

The ErgoMove 500 series stands out for its exceptional compactness and can be seamlessly integrated into even the smallest spaces for loads up to 500 kilograms through plug & play. The adjustable power levels provide optimal driving characteristics for every cart weight.

Accessories

	Console extension for sensor handle with pre-mounted bracket	Base plate	Double charger	Spare battery	Bracket clamps for the handles	Handle without rotary joystick	Plug protector	Extension cable	ErgoMove 500 Control Center

Footguard variants available upon request.

To ensure electrical conductivity, at least one swivel castor with antistatic / ESD tread must always be used in applications.

Series ErgoMove 2000 + 2000T

The ErgoMove 2000 series stands out with the highest safety technology and customizability, suitable for loads up to 2,000 kilograms in various applications. With the EM2000T variant, towing operations are possible up to 16 km/h, allowing for battery charging through the regenerative braking function.

Series ErgoBoost

Unlike the classic ErgoMove with its two load-bearing drive wheels, the ErgoBoost drive system, as a 'fifth-wheel solution', provides a simple starting aid. The integrated suspension ensures a constant ground contact force, thus enabling consistent drive support.

Accessories

	Double charger	Spare battery	Bracket clamps for the handles	Handle without rotary joystick

* To suit specific applications, swivel castors are available in additional height variations, along with adapter plates for height adjustment.

Footguard variants available upon request.

To ensure electrical conductivity, at least one swivel castor with antistatic / ESD tread must always be used in applications.

CUSTOMIZING

Customised solutions.

Individuality is a top priority.

Every logistical challenge is different. Therefore, we conduct an initial analysis of the current situation with each customer before collaboratively developing a tailor-made solution concept that fits their needs. The ErgoMove team is available for support both during and after the system's implementation. ErgoMove thus enables a holistic and sustainable solution to logistical challenges in an ergonomic, efficient, and safe manner.

Our goal: Moving everything. Anywhere.

This is how we understand individuality

Custom ErgoMove software configurations

By customizing the ErgoMove software, specific operating and driving modes such as speed, starting, and braking behaviour can be individually adjusted.

Special environmental conditions

For wet or outdoor use, special surface coatings or rust-free materials are used. IP protection classes can also be adapted to ensure product longevity even in challenging conditions.

Difficult ground conditions

Uneven ground can negatively affect the stability and traction of the driven wheels. Special spring units as accessories provide a solution for safe driving behavior.

System integrations

Electric machines and systems often require electric drive systems to be integrated and networked. ErgoMove is ready for integration. It can be operated with existing power sources or ErgoMove batteries can be used for other peripheral devices.

Special chassis requirements

A well-tuned chassis of driven fixed castors and swivel castors is the basis of every ErgoMove solution. Thanks to the nearly limitless variety of Blicke wheels and rollers, the right products can be found for all additional requirements – such as improved traction, noise reduction, electrical conductivity, or wheels for rail operation.

The concept: thoughtful. The reality: perfect!

A STRONG PARTNER

ErgoMove. With the expertise of Blickle.

Safety from the world market leader.

The ErgoMove Business Unit has specialised comprehensively in electrically powered wheel solutions within the Blickle Group. The in-house development and production facilitate the swift implementation of high-quality solutions. Additionally, the sales and dedicated service unit ensure optimal customer service.

**INNOVATION AWARD FOR
ERGONOMICS 2021**

ErgoMove is a division of the Blicke Group, headquartered in Rosenfeld in southern Germany, drawing upon over 70 years of experience and expertise in the field of mobility solutions. Today, the ErgoMove Business Unit is a specialist in the development, production, and implementation of innovative e-mobility solutions across various industries. The high Blicke standard of quality, Made in Germany, flexibility, and reliability is evident in every ErgoMove solution.

ERGOMOVE
moving everything. anywhere.

Blicke
we innovate mobility

At a glance:

- Over 1,300 employees worldwide
- World market leader among manufacturers of wheels and castors
- Standard range of 30,000 types of wheels and castors
- 21 proprietary sales subsidiaries in Europe, North America, Asia, and Australia
- Representative offices and sales partners in over 120 countries worldwide
- Certified according to DIN EN ISO 9001, DIN EN ISO 14001, DIN EN ISO 50001 and DIN ISO 45001
- Over 70 years of experience and expertise in the field of mobility solutions
- Made in Germany

ErgoMove – The system

control concepts,
drive concepts and
options.
